Patent No. US20020132753a1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PT23

CURRENT APPLICATION NUMBER: US/09/764,864

CURRENT FILING DATE: 2001-01-17

Prior application data removed - consult PALM or file wrapper

NUMBER OF SEO ID NOS: 1792

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 1180

LENGTH: 162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   97.1%; Score 727; DB 10; Length 162; 100.0%; Pred. ```

```
The invention relates to novel isolated polypeptides (I), and diagnosing, preventing and treating diseases including immune system diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune transplant rejections and graft versus host disease, infectious diseases transplant rejections and graft versus host disease, infectious diseases c.g. of hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood related disorders (slockle cell anaemia), myeloproliferative disorders (e.g. daucher's disease, parkinson's disease), chromosomal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (nicasase), reproductive system disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of disorder (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAU17089-AAU1883 represent novel signal transduction cylenthy protein, amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 87 VGGKTVKLQİWDTAGQERFRSVTRSYYRGAAGALLVYDITSRETYNSLAAWLTDARTLAS 146

The invention relates to novel isolated polypeptides (I), and display to (I) are useful for displayingleotides (II). (II) and the antibody to (I) are useful for displayingling including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune clasorders (e.g. congenital and acquired immunodeficiencies, autoimmune trajections and graft versus host diseases. Infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. Guorber's disease, Parkinson's disease), chromosomal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal alsorders (e.g. globertlonephitis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders (e.g. arrhythmia), respiratory disorders, (alsorders (cirhosis), liver disorders (cirhosis), as stimulators of B-cell responsiveness to pathogens; activators of T-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies eg acquired immune deficiency syndrome (AlDS). AAU17089 appresent novel signal transduction pathone, and sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                      polypeptides useful for diagnosing, treating, preventing and/or saing disorders related to the proteins, including cancers, immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 225;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      89.6%; Score 1147; DB 22;

```

The present invention describes a novel human gene nucleotide sequence and protein designated Rab4b. The human Rab4b protein sequence shows homology with the protein sequences dRab4 and rRab4b (AAB23762 and AAB23763, respectively). The present sequence represents the dRab4 amino acid sequence given in the present invention.

                                                                                                        The present invention describes a novel human gene nucleotide sequence and protein designated Rab4b. The human Rab4b protein sequence shows homology with the protein sequence alkab4 and rab4b. (AAB23762 and AAB23763, respectively). The present sequence represents human Rab4b.
                                                                                                                                                                                                                                                                                                                                     use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           developmental biology; cell signalling; insecticide;

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. and useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGIT6-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511). ABB57737-ABB72072) 8888888888888

which represent the munical such as cytostatic, hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; costeopathic; antiparkinsonian; nootropic; neuroprotective; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic, hypotensive; dermatological; immunosuppressive; antidiabetic, hypotensive; dermatological; immunosuppressive; antidiamatory; antibacterial; antivaria; antithrematic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoinmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal heamoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            42 FLFKFLVIGSAGTGKSCLLHQFIENKFKQDSNHTIGVEFGSRVVNVGGKTVKLQIWDTAG 101

the 5602 mucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a oligonucleotide comprises a 1 least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in a gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers also when the proteins encoded by the full-length cDNAs. The primers also when the proteins encoded by the full-length cDNAs. The primers also when the full-length cDNAs allowed the abonc while the full-length cDNAs are present human cDNA sequences; AMB92446 to AMB95893 represent human and sequences; and AAH13612 to AAH13612 represent clause and sequences; and AAH13612 to AAH13612 represent clause and sequences; and AAH13612 to AAH13612 represent clause and sequences; and AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13612 to AAH13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes primer sets for synthesising 5602 full-length coRhs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of
                                                                                                                                                                                                                                                                      Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

```
The invention relates to novel isolated polypeptides (I), and polynucleotides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Addison's disease), reproductive system disorders, gastrointestinal disorder (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of r-cells, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAU17059-AAU17683 represent novel signal transduction pathway protein, amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                              Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorders, primary haematopoletic disorders, hyperproliferative disorders (e.g. Gaucher's disease and cancer), neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders, in wound healing, epithelial cell proliferation, endocrine disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 50.4%; Score 645.5; DB 22; Length 307; Best Local Similarity 58.0%; Pred. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and immunomodulatory muscular active general; vulnerary; gastrointestinal general; nephrotropic; antilnfective; gynecological; or antibacterial active fitty. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capponishe for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and to produce other types of the invention.

Solidanostic amino acid sequences of the invention.

Solidanostic amino acid sequences of the invention.

Solidanostic and sequences of the invention format directly from WIPO expecification.
                                                                                                                                                                                                                                                                                                                                                                                                  Human, chromosome mapping, gene mapping, gene therapy, forensic;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding programmer of GTP-binding progra
